REQUIREMENT OF PROPOSED SYSTEM

4.1 MAIN MODULES OF THE SYSTEM:

There are basically three main modules in the systems.

- Admin User
- Registered User
- Visitor User

4.2 MODULE DESCRIPTION:

There are four modules in this system.

1) Admin User:

- This module "ADMIN" is considered. to be the main part for every website. The first and essential module for any online site is module is module of admin. This the Back Bone" for site.

- Now let us see admin module by taking our project in consideration.

- As all the contents of sites are managed. by admin, here he will perform

  First of All He Has To Login As Admin:

  - Admin after login in website he can manage products. (add, update, delete) categories and products.

  - He can also view the users, view orders placed by user.

  - Lastly he can give reviews to the it also.

2) **Registered User:**

- The module of Registered User is the module where the user who have completed their registration processes are the part of this module.
- They have shared their personal information as required asked for registration process. They are like member and must be served in satisfying manner with privacy.

  After login As Registered User One can :

  - View the categories of Products.
  - Search for products.
  - Add products to cart.
  - Give order for product for purchase.
  - They can also review the products.

3) Visitor:

- The End Users are visitor of the website. They can view the content of website as presented and maintained by admin.

- They can just visit the website they can see the gallery etc. They are not served well as registered user.

  What can End User do?
  They can do Following?

  By taking our Project in consideration.

  - Surfing in website.
  - View gallery.
  - Make search.
  - Register themselves.

4.3 FEATURES OF NEW SYSTEM:

- Strong protection with password.
- Display the list of different facilities.
- Display the list of various types of chosen product.
- Any number of users will be registered.
- Totally user friendly website.
- Once you registered then just enter userID and password and you can purchase any products.
- This proposed system will be more secure and aciculate.
